The three key concepts you need to know before working with electronic circuits are current, voltage, and power. Current is the organized flow of electric charges through a conductor, and voltage is the driving force that pushes electric charges to create current. The third piece of the puzzle is called power (abbreviated P in equations).

Hot wires are black or red, and neutral wires are white or light gray. For safety, all modern circuits include a bare copper or green insulated grounding wire. The grounding wire conducts current in the event of a ground fault and helps reduce the chance of severe electrical shock. The service panel also has a bonding wire connected to a metal water pipe and a grounding wire connected to a metal grounding rod, buried underground, or to another type of grounding electrode.
