Matching Rock Layers Lab Answers

Geologists have developed a system for correlating rocks by looking for similarities in composition and rock layer sequences at different locations. Certain fossils, called index fossils, existed for a very short time and were distributed over a large geographic area. They aid the geologist in correlating sedimentary rock layers.

Where To Download Correlation Matching Rock Layers Lab To Answer

Matching Rock Layers Lab Key

Once you have matched all of the cross sections, tape or glue them to a separate sheet of paper to form a single stratigraphic column. The cross sections will overlap each other where layers are duplicated. Slide (overlap) each rock layer until you find at least 3 perfectly overlapping layers □ then they fit together.

Flagstaff Unified School District / Overview

The lab is one in which students get to work together to figure out some geologic "puzzles". Correlating rock layers involves using techniques like index fossil correlation, superposition, and horizontal originality to piece together what happened in the past. Students are tasked with three "mini-labs" in this class block, which are of increasing complexity.
