### Millman & Parker, Elements of Differential Geometry | Pearson

Elements of Differential Geometry. This text is intended for an advanced undergraduate (having taken linear algebra and multivariable calculus). It provides the necessary background for a more abstract course in differential geometry. The inclusion of diagrams is done without sacrificing the rigor of the material.

If  $r$  denotes the variable in the interval  $(c, d)$ , then  $dB/dr = (da/dt)(dg/dr)$  by the chain rule.  $B$  is thus regular if  $a$  is regular and  $dg/dr \neq 0$ . But  $g(h(t)) = c$  so that by the chain rule  $(dg/dr)(dh/dt) = 1$  and  $dg/dr \neq 0$ . Thus the composition of a regular curve with a reparametrization yields a regular curve.

Too often books in differential geometry omit the use of diagrams, holding to the opinion that to do so would be a detriment to mathematical rigour. Much is to be gained by the reading and studying of this book, and after finishing it one will be on the right track to begin a study of modern differential geometry.
